

cold segment Ci, $i = 1..20$: one fresh pinned process per arm on new point s$(i-1)$; cold = setup + one-target online (cached, verified factor-log table)

cP	cS	cSaa	cSX	cSmF	cSmS	cSF	cSI	rT
base, unfolded	compact, fold	A/A	planted fold	stack − fold	stack − slots	+ filter	+ lift index build	tuned rho

rank blocks K1, K2 (seeds 101, 102): setup + rank stage to full rank + one target; table must equal B's

kP	kS	kSaa	kSmF	kSmS
B's rank stage	stack rank stage	A/A	− fold	− slots

Primary (frozen):

$$R = \frac{\overline{\text{rank}}(kP) + \overline{\text{cold}}(cP)}{\overline{\text{rank}}(kS) + \overline{\text{cold}}(cS)} \quad \text{(end-to-end cold)}$$

improvement iff 95% lower bound > 1; bootstrap over points and attempts.
Online cP/cS co-reported, never decides. S = cost/(rho ms/step)/$\sqrt{r}$.
